

Business Problem & Analytical Approach

Business Context

A growing coffee retail business requires visibility into sales performance, customer purchasing behavior, and operational efficiency.

Management wants to understand:

- What is driving revenue growth?
- Which products contribute most to sales?
- Which hours generate the highest revenue?
- Are stores performing consistently?
- Where are future growth opportunities?

The challenge is to transform raw transactional data into actionable business insights that support operational and strategic decision-making.

Analytical Approach

The analysis was structured into three areas:

Revenue & Store Performance

Evaluated overall business growth, store contribution, and sales distribution.

Time Intelligence

Analyzed hourly and daily revenue patterns to identify peak business periods and operational concentration risks.

Product Mix Analysis

Examined category and product-level performance to uncover hidden growth opportunities and customer purchasing trends.

Outcome

The project identified key revenue drivers, operational risks, and product opportunities that could support staffing decisions, inventory planning, and future business growth initiatives.
