

Coffee Shop Sales Analysis

Project Overview

This project analyzes six months of transactional sales data from a multi-store coffee chain to identify revenue drivers, operational bottlenecks, product performance trends, and growth opportunities.

The analysis was developed using Power BI and dimensional data modeling techniques. A flat transactional dataset was transformed into a star-schema model to support scalable reporting, time intelligence analysis, and business decision-making.

Business Objective

The objective was to answer the following business questions:

- What is driving revenue growth?
 - Which products contribute the most value?
 - When does the business generate most of its revenue?
 - Are stores performing consistently?
 - What operational risks and growth opportunities exist?
-

Dataset Overview

- Period: Jan 2023 – Jun 2023
 - Stores: 3
 - Transactions: 149,116
 - Total Revenue: \$698.8K
-

Tools & Skills Demonstrated

Tools

- Power BI
- Power Query
- DAX
- SQL

Skills

- Data Modeling
 - Dimensional Modeling
 - Time Intelligence Analysis
 - Product Mix Analysis
 - Revenue Trend Analysis
 - Dashboard Design
 - Business Performance Analysis
 - Data Storytelling
-

Dashboard Pages

Executive Overview

Business KPIs, revenue trends, store performance, product contribution, and weekday vs weekend analysis.

Time Intelligence Analysis

Hourly revenue patterns used to identify peak business periods and operational dependencies.

Product Mix Analysis

Product-level analysis used to identify category growth opportunities and hidden revenue signals.

Key Findings

Revenue Growth

Revenue increased from \$81.7K in January to \$166.5K in June, representing more than 100% growth over six months.

Revenue Concentration Risk

The 8–10 AM period generates more revenue than all afternoon hours combined, creating significant operational dependency on a three-hour window.

Retail Opportunity

Coffee beans were the fastest-growing category, increasing approximately 89% during the analysis period.

Balanced Store Performance

All three stores exhibited similar growth patterns, indicating business growth was not dependent on a single location.

Weekday Dependency

72% of total revenue is generated during weekdays, highlighting an opportunity to improve weekend monetization.
